

Molecular Ecology and Evolution: Approaches and Applications

Filesize: 5.26 MB

Reviews

*This book is great. I have go through and so i am confident that i will going to read through once again again in the future. I am just easily can get a satisfaction of looking at a written book.

MOLECULAR ECOLOGY AND EVOLUTION: APPROACHES AND APPLICATIONS

To get **Molecular Ecology and Evolution: Approaches and Applications** PDF, remember to refer to the button below and save the document or get access to other information which might be in conjunction with **MOLECULAR ECOLOGY AND EVOLUTION: APPROACHES AND APPLICATIONS** book.

Book Condition: New. Publisher/Verlag: Springer, Basel | In the last 25 years, we have witnessed a revolution in the way that ecologists and evolutionary biologists approach their disciplines. This revolution has been fueled by the ability to dissect the genetic and molecular basis of variation that is partly the currency of these disciplines. Using modern molecular techniques, we have begun to restructure the spectrum of questions that can be addressed in studying the mechanisms and consequences of the ecology and evolution of living organisms. The molecular revolution has come in waves, so to speak, with three particularly important developments. The first concerns the establishment and widespread use of protein analysis. Microcomplement fixation and isozyme electrophoresis were the techniques around which much of the genetic work in ecology and evolution were once based. The next wave started with the development of recombinant DNA technology and centered around the use of restriction fragment length polymorphisms (RFLPs) and sequencing of DNAs cloned in bacteria. This technology was the first to actually examine and accumulate genetic information at the nucleotide level. The most recent wave of technology that we are currently experiencing is based on our ability to amplify DNA sequences enzymatically via the Polymerase Chain Reaction (PCR). Several techniques related to PCR have been developed and used extensively in ecological and evolutionary studies. | I: DNA fingerprinting and behavioral ecology.- Arbitrary primer mediated fingerprinting in plants: Case studies in plant breeding, taxonomy and phylogeny.- DNA amplification fingerprinting: A general tool with applications in breeding, identification and phylogenetic analysis of plants.- The analysis of simple repeat loci as applied in evolutionary and behavioral sciences.- Multilocus DNA fingerprinting and genetic relatedness in plants: A case study with banana and tomato.- Measuring reproductive success in insects.- Unravelling the components that...
